

Inspiration Hub

Decentralised Human Organisation

The Inspiration Hub is where people in the community can collaborate on weaving together uplifting projects and business start-ups, with a view to creating a cohesive and pragmatic operational strategy that contributes to the health and wellbeing of the community in which the Inspiration Hub operates.

The Inspiration Hub provides a physical and dynamic base in Nature, from which we can meaningfully connect with others in the community to create awareness of the many solutions, innovations and resources available to us that can contribute to local prosperity for the benefit of all.

The proposed location for the hub will be on approximately 1 – 2 acres of rural land, preferably with access to woodland and as close to Hove, Shoreham and Steyning as possible, with the objective of placing three [Glampitect pods](#) on the land as independent, yet interconnected, cosy and welcoming spaces for a HEAL Centre, Earth Bowl Café and Activities Hub.

Mission: Designing and developing conceptual and actionable frameworks for decentralised health, food and energy provision, using regenerative and disruptive materials, processes and technologies.

Purpose: Showcasing innovation through healthy environment and lifestyle applications on site, such as a clean atmospheric water supply, decentralised energy sources, regenerative soils, nutritious organic food and creating a welcoming and enjoyable environment in which to re-connect to nature, each other and to self.

The **HEAL Centre** will host retreat days, group meditations, sharing Circles, workshops, sound baths and events that promote a healthy environment and lifestyle.

Inviting the community to engage in a conversation about the many creative and innovative healing solutions already available to us. A good place to begin, is to explore the personal and collective benefits of achieving coherence with our body, our mind, and therefore the world around us. We already have powerful tools and resources available, thanks to [InnerScience Research](#), the [HeartMath Institute](#) and [The Stargate Experience](#).

Learning how to experience the benefits and rewards of a healthy environment and lifestyle, empowers people to embrace life in a more enjoyable and fulfilling way.

The **Earth Bowl** café offers a range of organic cold pressed juices, smoothie bowls, plant-based food, hot cacao and superfood beverages for all participants attending a workshop or event.

This is to enhance the experience at the Inspiration Hub and to ensure that guests are nourished with the best possible nutrition to sustain them during our activities.

Looking to the future, we aim to grow our own organic food for the Earth Bowl, using permaculture principles, run food growing workshops and be able to use our food waste as an energy source for heating and cooking in the Earth Bowl. Working and collaborating with local farms and food producers to provide organic wholefoods direct to the community.

The **Activities Hub** is where we explore, discover and create through small workshops, talks and demonstrations that bring the community together in a joyful environment.

By showcasing many new and innovative technologies and modalities that promote a healthy environment and lifestyle, we hope to inspire the community to find purpose in projects that empower individual and collective wellbeing.

Innovation Showcase:

On-site Atmospheric Water Generator

‘Water, water everywhere, but not much to be found that’s healthy, clean and near ... until now’. Water is a life-giving element that can reasonably be described as having truly magical properties, in that it **holds memory**, **reacts to human emotions** and **challenges the laws of physics** as we know them.

The Inspiration Hub proposes to capture the imagination of the community, by re-telling the fascinating story of water and sharing the many health and environmental benefits of drinking locally sourced pure **atmospheric water**, that comes in reusable and compostable **plant-based bottles**. This is where we introduce the community to the **Plastics Contained** project, which deals with the problem of plastic pollution, while also creating awareness of a viable ecological solution within easy reach.

When we combine electrical energy with water, the power of water beyond essential hydration becomes very clear.

The Inspiration Hub is exploring mutually beneficial collaborations to provide the community with **our own brand** of eco cleaning and disinfectant products, made with **Hypochlorous Acid** which is a natural byproduct of electrolyzed water.

Additionally, we also look forward to exploring the possibility of benefiting from an exciting new venture to **produce clean hydrogen**, which we could conceivably use with our atmospheric water to create **hydrogen-rich water**.

APPLICATIONS FOR PRIVATE LABEL HYPOCHLOROUS

Healthcare
For hospitals, care homes and clinics

People & places
For all busy environments

Agriculture & horticulture
For crops, cut flowers & vertical farming

Bird & animal welfare
For avian, equine, farm, pet and veterinary care

Skin Care & Cosmetics
For anti-bacterial and cosmetic use

Pharmaceutical
For medical devices

On-site Permanent Magnetic Generator

‘Everything is energy and energy is everywhere, the most natural way to harness it hasn’t always been very clear ... until now’. Similar to the story of water, magnetism has a positively profound impact on [human connection](#), [health](#) and [wellbeing](#), that expands into other possible solutions such as [clean reliable energy](#).

The Inspiration Hub proposes to introduce the community to a number of regenerative energy innovations, with the first being a [Permanent Magnetic Generator](#) to power the Atmospheric Water Generator and the pods on site.

50kW Silent Magnetic Generator

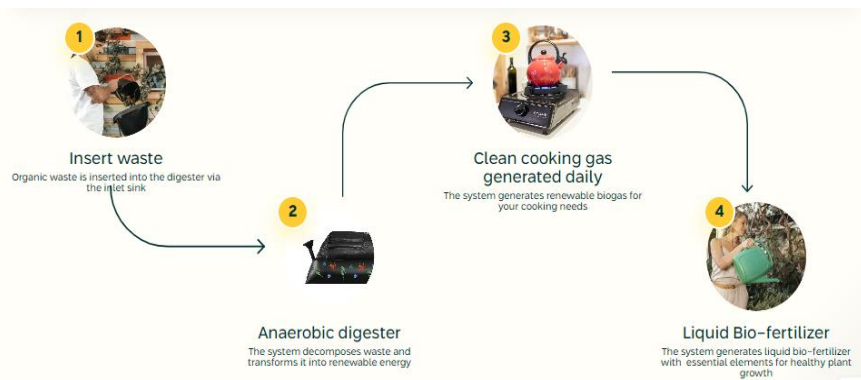

The project has plenty of scope for expanding into the field of magnetism as it relates to [electromagnetic coherence](#), and exploring various pathways that can be followed to achieve [coherence through meditation](#). Meditation is a healing practice that can benefit all demographics, which provides a solid foundation on which to build an [All Generations](#) project.

On-site Anaerobic Digestion

All food scraps from the Earth Bowl café will be fed into an anaerobic digester, with the digestate being used as a rich fertilizer for local food growing, with the biogas produced being used for heating and/or cooking.

There will be [anaerobic digester toilets](#) on site and the digestate could be added to composting material or used in the [mycorestoration of surrounding woodland](#). As with the food digester, the gas can be used for heating, cooking or even for a gas firepit if appropriate.

As well as creating a closed loop cycle for food scraps on-site, the Inspiration Hub will also launch the [SaSi project](#), to explore collaboration opportunities with other organisations who are similarly looking to connect farmers, growers and the community to achieve local food sovereignty. The [PFFA](#) and [Ooooby](#) being two good examples, amongst others.

There are many other possibilities to explore and the Inspiration Hub provides a grounded and stable foundation, on which to build meaningful and achievable projects that improve local health, wellbeing and prosperity.

The Inspiration Hub is also an opportunity to improve the self-reliance and autonomy of our community, gathering people together in a peaceful and creative space in Nature where we can plan the desired journey ahead and where the vision humbly begins.

Funding the Inspiration Hub:

There are many creative and rewarding ways to fund the launch of the Inspiration Hub, such as independent contributions, donations, grants and [use-credit obligations](#) for products, services, planned workshops and events.

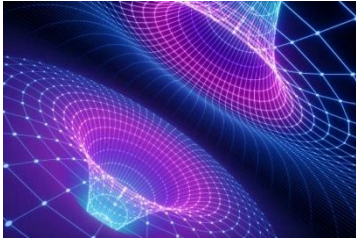

In addition to the many innovations and activities proposed for the Inspiration Hub site, we will also be actively promoting the [healing power of music](#) and the [healing power of art](#) through the hub.

‘A child’s laughter is music to many far and wide, as are harmonious melodies and the sounds from memorable experiences that invoke joy inside’. Music will be an integral part of the Inspiration Hub, with screenings, talks and activities exploring how we can meaningfully connect and heal through music, sound and dance. The Inspiration Hub will [seek grant funding](#) for community-led observational research into the healing power of music, sound and dance through workshops and retreat days in Nature.

Our first fundraising venture into the arts, provides an opportunity to introduce a gracious and generous supporting member, [Linda Joyce](#), who has kindly donated one of her [beautiful sculptures](#) as our first art piece to auction in a fundraiser. We are also looking to facilitate workshops taught by Linda at the Inspiration Hub, where others in the community can learn from her experience, creative skills and talents, and be inspired to weave their own authentic skills, talents and passion for art into the process.

Another creative approach to [raising funds](#), is to provide a workshop introducing the [power of magnetic therapy](#) through a [brilliant innovation](#) by David LaPoint, where participants get to make their own [static magnetic healing array](#), or can attend a half-day learning retreat exploring electromagnetic healing as the theme. These workshops and retreats will operate through donations, with a minimum donation to cover the cost of the kits. These workshops could also extend into making Inspiration Hub branded original [Primercubes](#), and to further our community-led research into exploring its potential for improving individual health and wellbeing.

TAG (Tradable Artistic Gold) Collectables, is another fundraising project that tells a story of community prosperity and local economic security. For this project, the Inspiration Hub proposes running a local art competition, whereby artists submit artwork that they feel reflects the Inspiration Hub's vision of Wellbeing in Nature.

A digital copy of the artwork is placed in the TAG gallery on our website, where people can reserve a limited-edition 24-carat pure gold note, featuring their chosen artwork. Whoever's artwork reaches the minimum order threshold will receive the first three minted serial numbers of that series as a reward. The rest of the notes in the series will go to the people who've reserved them through donations (with a minimum donation amount that covers the cost of minting).

Once the minimum order quantity for an art piece is reached, the artwork is minted in gold and becomes an authentic 'Tradable Artistic Gold' limited edition collectable, which can be traded with other members to broaden and grow individual collection portfolios. This contributes to growing local economic stability through 'shared-holding' of tradable gold in the community, which is a valuable commodity that's been used for thousands of years as a stable and secure form of trusted exchange.

All donations and funds raised from the aforementioned projects will go towards funding the launch of the Inspiration Hub.
